

# **ALL ON 4 & 6 DENTAL IMPLANTS FOR SAME DAY - FULL MOUTH TEETH**

# Introduction

We have very quickly come from a time when the expectation was that virtually everyone would lose some or all of their teeth and be left with dentures. We are no longer living in a time when we can expect dental disease and all of its attendant miseries. There are still many people who suffer in silence with missing teeth and loose dentures, people who have failing teeth wondering what the future holds. Now we have dental implants we can actually replace missing teeth helping to rebuild damaged mouths. This great innovation has expanded massively worldwide as its potential is realised. It is not a universal remedy, but using dental implants allows spaces in the mouth to be filled without damaging existing teeth or to give support where there are no teeth at all.

**Dr Fezaan Gatrad Qualified to replace dental implants**

BDS, MJDF RCS Eng, RCS Eng, MSC Dental Implantology

I am the principle dentist and practice co owner. I have been practicing for almost 15 years. I am passionate about transforming peoples' lives by enhancing their smiles.

Dr Fezaan Gatrad BDS MJDF (ENG) RCS MSC

# ALL ON 4 & 6 DENTAL IMPLANTS FOR SAME DAY - FULL MOUTH TEETH

When you have suffered tooth loss, whether that has been due to disease or perhaps to an accident then considering dental implants for the full mouth maybe a very welcome solution to the problem. At Elegant Smiles Dental Practice, our expertise in providing this excellent solution to replacing full sets of teeth with either all on 4 or even all on 6 implants carried out on the same day, is the perfect solution that will restore your mouth to as close to its original state as it can be. All this can be carried out the same day.

When teeth are missing many things are affected. Not only have you lost your ability to chew and eat properly but your entire face shape can change and you may look a lot older than you actually are. Your speech will be affected too. But our dentists will help you with sophisticated dental implant treatment that will restore your smile and, rather than having to suffer for months, all this can be achieved in just one day. Whether you have all on 4 or all on 6 dental implants the procedure will be the same. Either four or six implants will be embedded into the jawbone. These titanium posts will then serve as the roots for the new teeth, that will be fixed on top of the implants. All on 4 and All on 6 dental implants treatments work by having 4 or 6 implants embedded into the bone of the jaw. The titanium metal posts will be the new roots for your teeth which will be fixed onto them.

## DENTAL IMPLANTS - ALL ON 4 & ALL ON 6

Currently the all on 4 or all on 6 dental implant treatment are the two options for treatment that is often called teeth in a day. this treatment addresses a problem for anyone who has multiple missing teeth and can address the problem in just one day by replacing upper and lower arch teeth. Replacement is accomplished with a fixed bridge attached to your dental implants. This treatment is particularly popular because a patient will not have to go without teeth for anytime at all because the entire treatment is delivered in just one day. For those for whom it is important that they experience the least impact on their life, speech and diet it can be the perfect solution.

## ALL-ON-4 DENTAL IMPLANT Treatment

### WHAT ARE THE BENEFITS?

- The first step is to carefully plan the treatment with your dentist so that your new teeth can be fitted on the same day and your new smile produced after only a few hours.
- The arch, or the entire set of teeth are supported by just 6 or 4 or implants with the cost advantage over the alternative of eight to ten implants.
- This solution to missing teeth is the closest you will ever get to having your own teeth back again.
- Longer implants will often be applied for those who have less bone and will avoid the necessity of bone grafting.
- Of course dental implants will require maintenance and proper care but unlike caring for dentures problems of wearing out be coming loose slipping or causing friction on the gums will not be issues that need to be dealt with.
- The treatment is very fast, providing results in the same day.
- These solutions can be effective for cases that are more complex for which previously no such solution would have been possible.

# THE PROCEDURE

Before any treatment is started our dentist will examine you thoroughly to ensure that there is sufficient bone mass to provide an anchor for the posts. At this point it may be necessary for you to have x-rays or CT scans to obtain the required information. Having either all on 4 or 6 dental implants is the procedure that will succeed due to the in depth planning and work that is done before the young implants are applied. We pride ourselves on our very high success rate with dental implant cases

- Before you have the procedure a model of your teeth or how your teeth used to be will be made and can be improved and adjusted as you require
- Once the procedure starts the dentist will make small cuts into the gum for the titanium posts to be introduced through
- At this point a set of temporary teeth will be fitted to the implant
- Once the dentist is satisfied that the bone has regenerated and that the wounds caused by the incisions are healed, treatment can go ahead
- The final prosthesis will be attached after around 4-6 months. Dental implants are both functionally and aesthetically indistinguishable from natural teeth.

## **CARE AFTER IMPLANT**

Caring for your newly inserted implants is not difficult. You will continue to clean with a normal standard toothbrush and to floss your teeth. You will be instructed fully on how to care for your new implanted teeth. You will also need to come for regular cheque ups so that the dentist can cheque your mouth and that the implants are all fine.

## **THE COST OF DENTAL IMPLANTS FOR ALL ON 4**

There is no doubt that implants for the full mouth can completely change lives improving the enjoyment and restoring confidence. However this procedure should only be carried out by those who have the highest level of expertise and the skill required. The cost of this procedure therefore reflects these facts and implants - all on 4 as a full mouth tooth replacement ranges between £15000 and £30000

## **HOW DO ALL ON 4 IMPLANTS DIFFER FROM TRADITIONAL DENTAL IMPLANTS?**

Traditional implants did not support a whole arch of teeth. Having all on 4 implants allow a whole upper or lower jaw of teeth to be attached to them. For the traditional implant treatment six to ten implants might be needed. The reason we can work with just four implants is that the implants at the back of the mouth are angled increasing the surface area. Having fewer implants means less invasive treatment.

## **IS ALL ON 4 DENTAL IMPLANT TREATMENT GOING TO BE PAINFUL?**

No we will make sure that you do not suffer pain. After the treatment is complete you may have some redness and swelling and discomfort but both treatment for all on 4 and or all on 6 treatments will be virtually pain free. Any discomfort will be gone in a couple of days. You may lisp a little to begin with but most 'all on' patients return to normal within a few days.

## **HOW LONG DOES AN ALL ON 4 DENTAL IMPLANT PROCEDURE TAKE?**

There is an initial consultation with thorough examination. Then everything is done in at one appointment even if the patient does need to have teeth extracted. It will all be over in one day and you will be able to go home with your great new teeth and smile.

## **WHAT'S THE RATE OF SUCCESS WITH THE ALL-ON-4 DENTAL IMPLANT PROCEDURE?**

The figures for all on 4 dental implant procedures carried out in the UK is around 98.3% for lower teeth and around 98% for upper teeth.

## **AM I A SUITABLE CANDIDATE FOR ALL-ON-FOUR OR SIX IMPLANTS?**

We would use a CBCT scan of your jaw to evaluate your jawbone in terms of volume and density. Ninety-five percent of people would be judged suitable to have "all on" treatment.

## Further information

I hope you found this short summary useful. If you require further information or wish to ask some questions please do not hesitate to get in touch. You can contact me at the practice or send an email to the following email address:
